Only observed checkpoints are shown; this is not a final-load forecast.

Booking Pace vs Historical Benchmark

Booking Checkpoints

Flight	Days Before Departure	Booked Passengers	Booked Seats (%)	Historical Benchmark (%)	Gap vs history (pp)
KEF-CPH-20261008	60	24	13.33	20.19	-6.85
KEF-CPH-20261008	45	41	22.78	32.02	-9.24
KEF-CPH-20261008	30	67	37.22	48.91	-11.68

Pricing sensitivity

Select Flight

KEF-JFK-20261011

▼

Independent price and demand assumptions. These are scenarios, not demand predictions.

Future Ticket Revenue (EUR) | Price Change (%)

Demand Change (%)	-10.00	0.00	10.00
▲			
-20.00	1,140.49	1,267.21	1,393.93
0.00	1,425.61	1,584.02	1,742.42
20.00	1,710.74	1,900.82	2,090.90

Revenue Change vs Baseline (EUR) | Price Change (%)

Demand Change (%)	-10.00	0.00	10.00
-20.00	-443.52	-316.80	-190.08
0.00	-158.40	0.00	158.40
20.00	126.72	316.80	506.88

Baseline: historical remaining booking pickup at the same lead time; fare = route base fare × 1.45.
Price and demand vary independently. Sales are capped at available seats; existing sales stay fixed.
Break-even without a capacity cap: – 10% price needs +11.11% sales; +10% price tolerates –9.09% sales.
At D–1, remaining demand is zero because the generator excludes departure-day bookings.
Scenarios are sensitivity assumptions, not elasticity estimates or optimal-fare recommendations.

Commercial review

CPH | Prioritize investigation

Route gap: –3.98 pp; 8 of 18 flights below –5 pp.

20 October: D–13, 78 seats left, gap –13.87 pp, 13 bookings in the last seven days.

Check comparable competitor products and recent pickup before considering a targeted offer.

Monitor daily pickup and realized average fare; no automatic discount from the gap alone.

JFK | Review near-capacity inventory

11 October: D–4, 97.5% booked, six seats left, gap +10.25 pp.

Baseline assumes 3.12 more passengers and EUR 1,584 of future ticket revenue.

+10% price with –20% demand gives EUR 1,394: EUR 190 below baseline.

Check fare-product availability and market positioning; high LF alone does not prove a price increase.

LHR | Monitor performance and product mix

Route gap: +2.58 pp; no flights below –5 pp.

26 October: D–19, 45 seats left, gap +9.12 pp.

Investigate whether strong bookings also support fare performance; historical fare comparison is absent.

Next evidence: comparable fares, product restrictions and remaining demand. Findings are synthetic.

Methodology

DATA & SCOPE

Synthetic case study; not Icelandair operational data.
Snapshot: end of 7 October 2026. Currency: EUR.
54 upcoming flights on three illustrative routes.
Raw data and rebuild scripts are included.

BENCHMARK & MEASURES

33 departed comparison flights per route.
Bookings matched by route and days before departure.
Zero-booking flights remain in the benchmark.
Portfolio gaps are capacity-weighted percentage points.
Booked revenue means cumulative ticket sales.

SCENARIO ASSUMPTIONS

Price and demand change independently.
Additional sales are capped at remaining seats.
Existing bookings stay unchanged.
Departure-day sales are excluded; D–1 demand is zero.
Alternatives cannot be summed or treated as forecasts.

DECISION LIMITS

± 5 pp thresholds trigger review, not automatic pricing.
No seasonal, weekday or competitor controls.
No fare restrictions, connections or cancellations.
No group bookings or overbooking.
No causal elasticity, optimal fare, yield or profit estimate.
